

Exhaust Kit #239576 – 3.5CM RV

The exhaust kit can be installed two ways. One version is designed for installation on vehicles with the muffler outlet directed towards the right and the other towards the left (when viewed from the service side of the generator set). Because the length varies with most installations a tail pipe is not furnished with the kits. A tail pipe must, however, be installed to direct the exhaust gases beyond the perimeter of the vehicle. Use a tail pipe with gradual bend (not 90°) to avoid excessive back pressure and face tail pipe away from normal air stream. Position tail pipe end so that discharged exhaust gases may not be drawn into the vehicle interior through windows, doors, air conditioners, etc.

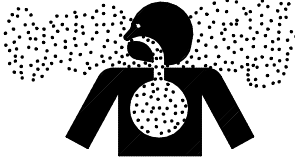

NOTE

Make sure exhaust system components are positioned well away from the drain opening in the bottom of the mounting tray. Also make sure the components are not blocking access to the oil drain plug.

NOTE

Do NOT use flexible tail piping as this type could crack or break and allow lethal exhaust fumes to enter the vehicle.

 **WARNING**

carbon monoxide.
Can cause severe
nausea, fainting,
or death.

Completely seal off compartment to maintain vapor tightness to living space. See operator's manual for complete installation instructions.
